Substack

San Francisco, California

SOFTWARE ENGINEER, STANDARDS & ENFORCEMENT

March 2026 - Present

- Engineer on the Standards & Enforcement team.

Netflix

Los Gatos, California

SOFTWARE ENGINEER L4, PLAYER EXPERIENCE

September 2024 - October 2025

- Owned and developed an in-house observability solution for game developers to be able to aggregate their games' logging and errors for the purpose of monitoring and alerting framework. Designed a solution to search and aggregate 5 separate Elasticsearch clusters at the same time for the purposes of following a player's journey as they played a game, and built and designed the frontend with collaboration with product design for an easy-to-use UI for developers.
- Improved the latency and accuracy of the Gameplay History Service, designing a solution that was able to provide realtime updates to a player's gameplay history rather than waiting 30 minutes for summarization. Preceding this, audited the accuracy of the previous system as well as discrepancies, and built a microservice for other teams to leverage a player's gaming history.
- Proposed a set of significant metrics to determine the success of a game on Netflix as well as for the purpose of focusing observability efforts. Audited and implemented incidents and alarms for metrics including concurrent players of games, how many times a game is started per second, and metrics related to cloud save errors.

LinkedIn Corporation

Sunnyvale, California

SOFTWARE ENGINEER, BILLING

March 2022 - August 2024

- Built the testing-in-production framework for LinkedIn Business Platform, which involved routing to a sandbox database instance when methods are invoked in a test context, to allow for testing in as close to a production environment as possible.
- Designed and developed an automated reconciliation service that would compare offline sources of data, and if there was an inconsistency between two services, automatically updated the dependent service with the correct data from the source of truth.
- Investigated and designed billing parity between legacy and new systems as well as designed and implemented the process for issuing billing corrections and credits in new billing systems utilizing Apache Beam.
- Built a monitoring and alerting framework for the Billing team, improving monitoring and alerting coverage from 18% to 91.7%. Automated the generation of new alerts when new repositories or APIs were created, and oncall alerts were retuned to more accurately reflect issues in the system. Additional alerting also led to the early discovery of several high-impact issues.
- Optimized build speeds for 10 billing-owned repositories by 1.5x - 2x to improve developer productivity and velocity.
- Mentored and onboarded interns and new engineers onto the team, devising onboarding plans as well as tasks and projects.

Quora, Inc.

Mountain View, California

SOFTWARE ENGINEER, DISTRIBUTION PRODUCT

September 2020 - February 2022

- Developed and iterated on the home page experience for user engagement, including launching experiments related to the composition of our feed that increased direct home visits by 0.5%, improving the scrolling experience on feed that increased user active hours by 0.4%.
- Designed, developed, and experimented on solutions for home feed to be more responsive and evolve to users' actions within a session.
- Led a team of engineers and designers on a project focused on user experience of home feed, focusing on activity time and engagement.
- Audited, iterated on, and maintained feed logging, including building a solution for logging the time the user dwelled on content to help debias and improve distribution of short content at Quora, and unifying existing logging solutions across content types.
- Developed and launched notification-related experiences for users, including rich push notifications, improving direct active hours by 5.6% and notification opt-outs by 12.6%.
- Designed and built a Suggested Spaces e-mail and notification experience that increased user active hours and engagement by 5%, as well as Space follows and posts by 14%.
- Mentored and devised on-boarding plans for new engineers on the team.
- Responsible for reliability and speed metrics for Quora's home page.
